

COO-VAR®

PAINTS, PRIMERS AND SPECIALISED COATINGS

Case Study: Dampsheild Case Study

Project: Commercial

Products used: Dampsheild & P101 Two Pack

Product Functions: Dampsheild -A gas-permeable membrane that enables earlier covering of new concrete. Also has excellent adhesion properties.

P101 Two Pack- This coating has good chemical resistance making it easy to clean and durable. Will not fade or yellow when exposed to high levels of ultra violet light or support the growth of fungus. Can be used over compatible water based paints to provide a glaze over colour (not for use over conventional solvent based paints). An extremely hard wearing paint which can be cleaned many times without affecting the coating.

Works particularly well as a system underneath Coo-Var Profloor Plus.

Project Completed: Summer 2017

COVERING OUR CUSTOMERS' NEEDS SINCE 1908
